

José Javier Luna Mendoza
(jaluna070@gmail.com)

(Fullstack Developer – Java-Node/Angular-React)

SUMMARY:

- Aws Architect Associate Certified
 - Aws Developer Associate Certified
 - Aws Cloud Practitioner Certified.
 - Master Degree in software engineer.
 - Leadership/Management more than 20 years.
 - Personal & Leadership
 - Drive performance and support career growth
 - Set Clear Goals and Expectations
 - Promote best engineering practices
 - Around 6 years of experience in the IT Industry working as a Full Stack Sr. Developer implementing Microservices applications using different Backend and Frontend Frameworks and Technologies along with Agile Methodologies.
 - Expertise in Designing and Developing UI/UX Rich Web and Mobile Applications, with state of the art patterns and methodologies, e.g. Progressive Enhancement, Graceful Degradation, Responsive Design, SMACSS, OOCSS.
 - Experience in Designing and Implementing Component Specifications, UI/UX Guidelines and Best practices, API Documents, and User Guides.
 - Experience in Designing AngularJS/Angular modules, services, templates, directives, components, a sound understanding of dependency injection patterns, and E2E testing.
 - Experience in Designing and Developing Web Applications using HTML5, CSS3, JavaScript, ECMAScript 6, TypeScript, AngularJS, Angular, React, Node.js, Gulp, Webpack, Express JS, jQuery, Bootstrap, Material.
 - Expertise in using React JS components, Forms, Events, Keys, Router, Animations, Flux, Redux, and MobX.
 - A good amount of work was done on Reactive forms or Web Forms 2.0 in Angular 2 and their Validations.
 - Experience working with AWS, IBM cloud, Google Firebase
 - Hands-on creating desktop applications with Angular 2/4 and Unit Tests with Karma-Jasmine.
 - Expertise in React.JS framework and integrate them to Node.js server-side code.
 - 2 years working with React-Redux-Redux Form to integrate the components and send states between components.
 - Hands-on Native iOS/Android development using Java and Swift.
-

- Experience in Developing Applications using Spring MVC, Spring Boot, Spring Cloud, JPA, STOMP WebSockets, MySQL, Oracle, and MongoDB.
 - Expertise in J2EE Technologies: JSF, XML, EJB, JSP, Servlets, JMS, JNDI, JDBC, jQuery, Swings, Hibernate.
 - Experience developing and documenting RESTful APIs, using Swagger OAS 2.0/3.0, OAuth, and JWT.
 - Experience with MicroServices Architecture and its Implementation under Cloud and Containers Platforms such as AWS, Azure, Heroku, Elastic Beanstalk, Docker, and Kubernetes.
 - Experienced in creating and managing Azure VM, VMware tools, Cloud Services, and Storages.
 - Hands-on Knowledge on Azure Cloud Services for creating Web - Applications and Knowledge on Azure CLI.
 - Worked extensively on Angular/Typescript SPA domains.
 - Hands-on Experience on Angular CLI (Command line Interface).
 - Experience with Agile development, SCRUM, CI/CD, and TDD.
 - Electronics, IoT, and embedded systems background.
 - Experience in design and development of multitier applications using Java 7 & 8, J2EE 6, JSP, Servlets, Applets, JPA, JMS, JDBC, XML
 - Extensive experience with Spring4.x along with JPA for managing the Database Transactions.
 - Expertise in Spring Security Framework for authentication and authorization.
 - Experienced in developing MVC framework-based websites using Struts and Spring.
 - Experience with Spring Core, Spring Boot, Spring Data JPA, Spring JDBC, Spring MVC.
 - Experience in developing Web Services using REST, consuming and producing using Spring Boot.
 - Experience in consuming Web Services (SOAP and REST) using Spring Boot.
 - Experienced in working with SOA architecture by producing/consuming SOAP-based web services.
 - Good working knowledge of testing frameworks like JUnit & Mockito.
 - Experience working in environments using Agile (SCRUM) and Test Driven development (TDD) methodologies.
 - Expert knowledge of J2EE Design Patterns like MVC Architecture, Singleton, Session Facade, Business Delegate, and Data Access Object for building J2EE Applications.
 - Experienced in using Version Control Tools such as Subversion, CVS, GIT, and GitHub.
 - Experience with Log4j for application logging facility using Log4j, writing JUnit test cases for unit testing, and maintaining the accuracy of the program code.
 - Extensively used JIRA for project management especially in Agile/Scrum environment.
 - Experience creating Java Microservices to improve complex applications.
 - Experienced in building tool MAVEN, GRADLE, ANT, and logging tool Log4J.
 - 10+ years strong experience in Software Analysis, Development, Implementation, and Testing Visual Basic.
 - 10+ years experience in network design, maintenance, and troubleshooting Novell Netware servers 4.0, 5.0 and 6.0
 - 5+ years in Software Analysis, Development, Implementation and Testing in .Net (C#, VB, ASP)
 - 5+ years in Software Analysis, Development, Implementation and Testing in PHP
 - 3+ years in experience designing html5, Bootstrap, css3 in DreamWeaver / Netbeans / Eclipse ides
 - 5+ years administering, maintaining, and querying databases in MySql (DDL, DML).
 - 9+ years administering, maintaining, and querying in Oracle Database (8.0.3, 8i, 9i, 10g, 11) (DDL, DML)
 - 4 years administering, maintaining, and querying in Oracle Database 10g and 11g
 - Experience in Linux-ubuntu, administration, and scripts creation.
 - Experience working with Microsoft Office Suite (Excel, Word, Powerpoint, Publisher).
 - 10+ yeas administering Windows Operating System
 - 10+ years experience creating reports in Crystal Reports
 - 5+ years experience creating reports in SAP Crystal Reports for .Net
-

- 3 years administering, maintaining, and querying in SQL Server
- Experience creating and developing in Oracle Developer (Forms and Reports).
- Expertise in working with RDBMS like Oracle, SQL Server, and MySQL using JPA and JDBC.
- Good experience in writing Queries, Procedures using SQL and PL/SQL in Oracle (9i, 10g, 11g) and SQL Server environments.
- 6 years creating and deployment reports in JasperReports
- 5 years creating applications using MVC in Cakephp
- Experience working with application servers like Apache, Tomcat, Glassfish.
- Experience with Mocha-Chai.
- Experience in working with small and large groups and being successful in meeting new technical challenges and finding solutions to meet the needs of the customer.
- Possess a good understanding of software methodology with strong analytical and problem-solving skills
- Good interpersonal, communication, and presentation skills.
- Experience with development IDEs such as Microsoft Visual Studio, NetBeans, Eclipse, IntelliJ
- Experience with Ionic (Angular) building mobile apps
- Experience with React-Native building mobile apps
- Experience with Openshift, Docker, Kubernetes
- Experience with Cloud Firebase
- Experience Publishing google mobile apps in the play store

EDUCATION:

- Bachelor's Degree in Engineering in Computer Systems, Tecnologico de Colima, Colima, Mexico
- Master en Dirección Estratégica en Ingeniería de Software, Universidad Europea del Atlántico (UNEATLANTICO)

TECHNICAL SKILLS:

Methodologies:	Agile, SCRUM, TDD, BDD, Continuous Integration and Delivery.
Backend:	J2EE, Spring MVC, Spring Boot, MySQL, MongoDB, AWS, Docker, Oracle.
Frontend:	HTML5/CSS3, Bootstrap, SASS, Typescript, ES6, Angular, Ionic, React, React Native, Swift, Karma, Protractor, Mocha.
Application Servers:	Apache Tomcat ver 7
Messaging Systems:	JMS, MQ Series, Apache Kafka
Frameworks/Libraries:	Struts 2.X, Spring, Spring MVC, Hibernate, JPA, Apache Wicket 7, Presentation Services, Cakephp.
IDE Tools:	Netbeans, Eclipse.
Web Services:	SOAP Web services, RESTful services.
Databases:	MySql 4x/5x, MS SQL Server 11, MongoDB, Oracle (DDL, DML)
Version control tools:	Git, Github.
Operating Systems:	UNIX (Ubuntu, Linux, OSX), Windows

Java Testing Tools: JUnit, Mockito, Wiremock

Front Testing Tools: Mocha-Chait, Jest

Other technologies: Raspberry PI, Arduino, Hardware and Electronics, AWS Cloud, Google Cloud, Kubernetes

PROFESSIONAL EXPERIENCE:

Company: WGU, Guadalajara, Mexico.

Duration: Jan 2023 - Present

Role: Senior Java & Angular Fullstack Developer

Responsibilities:

- Tech lead.
- Planning work with product owners.
- Working with Angular and typescripts for UI applications.
- Working and updating java informatica batch jobs
- Implementation and Documentation of RESTful APIs using Spring, Swagger, and OAuth.
- Working in Angular-Redux Form stories in university applications.
- SpringBoot building Application
- Created Server-Side and Client-Side application development guidelines to avoid common issues related to DB performance and Client-Side testability.
- Participating in the High-level and low-level system design, planning, estimation, and implementation.
- Designed and developed new applications based on SpringBoot & Angular.
- Implemented business layer using Spring framework / Node Js.
- Integrated application with Spring Security for form-based authentication and authorization.
- Implemented the Restful-based Web service application using JAX-RS / NextJs.
- Development of tables, views, and stored procedures using SQL Server.
- Created Unit test cases using Junit, Mockito, Jest.
- Deployed the applications on AWS.
- Used Github & AWS codepipeline as continuous integration (CI) tool.
- Used JSON Objects to send the data to the controller.
- Used SVN for source control.
- Worked in an Agile development environment.
- Perform code reviews, team training, and code refactoring to maintain quality standards.
- Used JIRA for issue tracking, bug tracking, and project management.
- Use AWS cloudwatch & Dynatrace for log monitoring

Environment:

Angular, Java, Spring Boot, MicroServices, JIRA, Product Development, R&D, Technology Transformation, Node Js, NextJs, AWS cloud.

Company: IBM, Guadalajara, Mexico.

Duration: December 2018 – Jan 2023

Role: Java Fullstack Developer

Responsibilities:

- Working with React and typescripts for UI applications.
- Working and updating java batch jobs
- Implementation and Documentation of RESTful APIs using Spring, Swagger, and OAuth.
- Working in React-Redux-Redux Form stories in financial applications.
- SpringBoot Application testing using wire mock
- Created Server-Side and Client-Side application development guidelines to avoid common issues related to DB performance and Client-Side testability.
- Participating in the High-level and low-level system design, planning, estimation, and implementation.
- Designed and developed new applications based on J2EE Design Patterns on Spring 4.x.
- Implemented business layer using Spring framework.
- Integrated application with Spring Security for form-based authentication and authorization.
- Implemented the Restful-based Web service application using JAX-RS.
- Development of tables, views, and stored procedures using SQL Server.
- Developed Persistent Classes using Hibernate mapping tool.
- Involved in documentation, review, analysis, and fixed production issues.
- Created Unit test cases using JUnit and Mockito.
- Deployed the applications on Tomcat Application Server.
- Used JENKINS as continuous integration (CI) tool.
- Used JSON Objects to send the data to the controller.
- Used SVN for source control.
- Worked in an Agile development environment.
- Perform code reviews, team training, and code refactoring to maintain quality standards.
- Compiled and built the application using the Maven build tool.
- Developed the application using Eclipse IDE.
- Used JIRA for issue tracking, bug tracking, and project management.
- Used Eclipse as IDE for development, build deployment, and testing the application.
- Used QTest for tests manual testings

Environment:

React (web), Hibernate, Spring Boot, MicroServices, JIRA, Product Development, R&D, Technology Transformation.

Company: Tata Consulting Services, Mexico

Duration: June 2018 - December 2018

Role: Support Level 2

Responsibilities:

- Monitoring different processes, systems, and Banking services of the client such as Bancanet Personal, Bancanet Empresarial and giving solutions to the different issues presented to all the clients.
 - Involved in the new projects of e-banking of the future to be involved in all the processes to be updated.
-

- Develop and maintain new as well as java based systems using testing tools like Selenium.
- Created and maintained the configuration of spring 4. X Application Frameworks IOC container.
- Developed the Restful-based Web service application using JAX-RS, and associated business modules integration.
- Used Jackson Parser in the web service's request response data marshaling as well as the unmarshalling process.
- Design and implementation of Spring-Security for the application for authentication process against LDAP, J2EE pre-authentication, and Database.
- Implemented Java-based POJO access to the application's Oracle 12C database using Spring JDBC ORM and typical data access and transfer design patterns.
- Used JSON Objects to send the data to the controller.
- Implemented PL/SQL queries and Stored Procedures as per the design and development-related requirements of the project.
- Successfully involved in test-driven development model (TDD) using JUnit.
- Developed unit test cases using Mockito framework for testing accuracy of code.
- Used JENKINS as continuous integration (CI) tool, for deploying applications into Weblogic Application Server.
- Maven was used as a build tool.
- Used Eclipse Luna as IDE for development, build, deployment, and testing the application.
- Used Team Foundation Server (TFS) for bug and issue tracking.

Environment:

Apache Tomcat ver 7, J2EE1.5, Servlets 2.3, JSP, JSF 2.0, JDBC, Netbeans, Eclipse. SOAP Web services, RESTful services (Spring boot), MongoDB, Oracle (DDL, DML), UNIX (Ubuntu, Linux, OSX), Windows, Ajax, JQuery, HTML, JavaScript, Bootstrap, Splunk, Selenium, JSON, POI (Generating Excel Documents, NEXMO (Send messages to a cell phone)., XML...

Company: Liconsa, Oaxaca, Mexico
Duration: September 1996 - June 2018
Role: IT manager

Responsibilities:

- Leadership and management teams from all Southeast Mexico.
 - Planning work with directors for new releases.
 - Participating in the High-level and low-level system design, planning, estimation, and implementation.
 - Developed the SOAP-based Web service (WSDL) application using JAX-WS, and associated business modules integration.
 - Used SOAP UI for Testing Web Services.
 - Used XML parser APIs such as JAXP (SAX) and JAXB in the web service's request response data marshaling as well as the unmarshalling process.
 - Implemented Java-based POJO access to the application's Oracle 10g database using iBatis mappers and typical data access and transfer design patterns.
 - Worked with JMS (java messaging service) for asynchronous communication.
 - Worked with JMS queues for P-P communications and Topics for one-many Communications.
 - Designed front-end using Java Servlets, JSP, HTML, CSS, and JavaScript, utilizing AJAX.
 - Wrote business rules using Drools and business logic processing customs declarations.
 - Implemented javascript for client-side validations.
-

- Implemented PL and SQL queries, triggers, and Stored Procedures as per the design and development-related requirements of the project.
 - Developed unit test cases using Mockito framework for testing accuracy of code.
 - Worked with executed unit test cases by using TestNG for fixes and logging with log4j.
 - Used JENKINS as continuous integration (CI) tool, for deploying applications into Apache Tomcat.
 - Responsible as SVN administrator and for deploying web applications in the Tomcat App Server.
 - Maven was used as a build tool.
 - Used Eclipse Kepler as IDE for development, build, deployment, and testing the application.
 - Used JIRA for bug and issue tracking.
 - Also worked in an Agile work environment.
 - Migrating from Novell Netware to Linux Suse (Including Groupwise and all network services)
 - Design and Upgrade (Develop) new versions of tools, using eclipse & netbeans.
 - Setting up servers, workstations and network services, hardware and software,
 - Organizing and configuring Network resources,
 - Establishing and maintaining a Network security system,
 - Guaranteeing data integrity and protection,
 - Providing systematic data backup and a retrievable data process,
 - Installing Oracle Database 8i, 9i, 10g & 11g in Netware 5.0
 - Establishing and maintaining the Oracle Database 8i, 9i, 10g & 11g in linux
 - Installing Oracle Database 9i in Linux Red Hat 8.0 and in Windows XP
 - Installed and intranet using Apache for Novell Netware and Linux 8 and I have installed in each system operating the My-Sql and PHP to do my web services.
 - Install and configure in Cisco Routers and Cisco Switches.
 - Creating programs in Visual Basic 6.0 for all different areas of Liconsa.
 - Creating Java and JasperReports desktop programs to take control of warehouses and milk production.
 - Create Cakephp MVC to control all the tools and cars located all around the company.
 - Creating C# .net applications to solve some systems issues created by 3er companies.
 - Creating Asp.net application to control all the documents created by Liconsa's company
 - Checking and maintaining all the computers and printers.
 - Create Java and JasperReports desktop applications to control all the information of families and children that receive milk by the company.
 - Create JSP servlet applications to control all the employees' payments.
-

- Creating some programs where I have to use the ODBC and Data Objects For Ole where I can get the information from Oracle Tables making programs in Visual Basic 5.0 or Visual Basic 6.0
- Create some applets in Java, where I can get the information of the Oracle's Database wherever I want, I use the TCP/IP to specify the direction where I going to get the information and work with this information in another type of database.
- Participating in the High-level and low-level system design, planning, estimation, and implementation.
- Designed and developed new applications based on J2EE Design Patterns on Spring 4.x. and tested the application with JUNIT using web services of REST.
- Developed front-end screens with Java Scripts and JQuery.
- Development of tables, views, and stored procedures using SQL Server.
- Developed Persistent Classes using the JPA mapping tool.
- Involved in documentation, review, analysis, and fixed production issues.
- Deployed the applications on Tomcat Application Server.
- Used JSON Objects to send the data to the controller.
- Worked in an Agile development environment to develop applications.
- Perform code reviews, team training, and code refactoring to maintain quality standards.
- Experience creating Java and C# Microservices to improve complex applications. that are better developed and managed as a combination of smaller services that work cohesively together for larger, application-wide functionality.

Environment:

Apache Tomcat ver 7, J2EE1.5, Servlets 2.3, JSP, JSF 2.0, JDBC, Cakephp, Netbeans, Eclipse, MySql 4x/5x, MS SQL Server 11, Oracle (DDL, DML), UNIX (Ubuntu, Linux, OSX), Windows, Ajax, JQuery, HTML, Java Script, Bootstrap
